Postfield
Systems

Postfield Systems is proud to be an authorised distributor of the Next2 loudspeaker range to the rail industry.

An innovative company with more than 40 years experience, Postfield Systems has unrivalled experience in servicing the rail industry, offering specialist support services and complete project expertise that adds value to the range of Cooper Next2 loudspeaker products.

“ We are delighted with the appointment of Postfield Systems as an authorised Cooper Next2 loudspeaker distributor for the rail industry. We have undertaken a full training programme with the Postfield Systems team and are already working in partnership on a number of rail projects. ”

Brian Walder, Managing Director,
Cooper Fire

CM Range

MC-6FT

AR-15FT

Postfield Systems has highlighted a number of Cooper Next2 products developed specifically for use in the challenging rail environment.

Projector speakers

The rugged PAC-15FT and RAC-15FT sound projectors are manufactured in an aluminium extruded case finished in white. Incorporated in these units is a high quality dual cone driver unit giving both clear speech and excellent background music reproduction for many applications both indoors and out. With a rugged construction, these units are ideally suited for use within the rail industry, prisons, car park areas, shopping centres and other public places. Both units are BS 5839, Pt 8 compliant and are weatherproof to IP54.

Cabinet speakers

The Safe range of elegant looking robust metal cabinet loudspeakers is vandal resistant and is compliant with BS5839 Pt 8. Recommended for voice evacuation systems in public areas, these speakers are ideally suited for use in railway stations, shopping centres, prisons, schools etc. The Safe range also offers a bi-directional 10W loudspeaker ideal for corridors.

Column loudspeakers

The slimline CM range of column speakers has been designed for installation with the kind of appeal normally associated with foreground music. These robust yet attractive loudspeakers are designed to give high quality sound reproduction. The speakers are ideal for use in airports, the rail industry, churches, small

theatres and cinemas. The speakers are BS5839 Pt 8 compliant as standard and have an ingress protection rating of IP65.

Ceiling speakers

Designed to be aesthetically pleasing and acoustically engineered for quality sound reproduction, the MC range of loudspeakers is ideal for voice evacuation systems, general public address and background music.

The 'FT' versions are supplied with fire domes, ceramic terminals and thermal fuse and are fully BS5839 Pt 8 compliant.

Horn speakers

The AR-15FT horn loudspeaker is manufactured in robust spun aluminium, coated in a tough, grey epoxy finish and is designed for heavy-duty industrial use, making it suitable for both indoor and outdoor use within the rail industry. These compact re-entrant horns provide high sensitivity combined with a tightly controlled sound dispersion pattern.

All products are backed by a full twelve months' warranty and leading support services.
